DETAILED ACTION

1. Applicant elected claims of Group I (claims 1-5) and cancel claims 6-10.
2. The listing of the claims must be changed to reflect the cancel claims. See 37 CFR 1.121.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 1-10 provides for the use of preventing reduction of sales in the preamble, but, since the claim does not set forth any steps involved in the method/process, it is unclear what method/process applicant is intending to encompass. A claim is indefinite where it merely recites a use without any active, positive steps delimiting how this use is actually practiced.
4. Regarding claim 2, the phrase "such as" renders the claim indefinite because it is unclear whether the limitations following the phrase are part of the claimed invention. See MPEP § 2173.05(d).

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the

Art Unit: 3622

applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

6. Claims 1-4 are rejected under 35 U.S.C. 102(e) as being anticipated by Wiser (6,385,596 hereinafter Wiser).

With respect to claims 1-4, Wiser teaches digital music file distributed through a computer communication network (Abstract). Producing an advertising digital music file by deteriorating or damaging a sound quality of an original music file of a record of an original music file of a record of a cooperating record cooperation (i.e. the un-encrypted versions of a song are either selected portions, or the entire song, but recorded with lesser quality, such as increased compression, different audio image or waveform and/or lower sample rate. These un-encrypted lower quality clips are available for free for previewing by the customer in order to decide whether or not to purchase the high fidelity version)(See col. 12, lines 12-15 and Figure 8); distributing the advertising digital musical file through the computer communication network (Figure 8).

Claim Rejections - 35 USC § 103

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. Claims 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over Wiser.

Claim 5 recites deteriorating the sound quality by converting a multi-channel sound of the original music to a single channel sound. Since, Wiser teaches using different methods of deteriorating the sound quality of the original music, such as different audio images, different bandwidth etc. (col. 12, lines 12-15) then it would have been obvious to have included in Wiser, the well known method of converting a multi-channel sound into a single channel sound as one of the different methods of deteriorating the sound quality of the music.
